

GLASS: a comprehensive database for experimentally validated GPCR-ligand associations

Wallace K. B. Chan, Hongjiu Zhang, Jianyi Yang, Jeffrey R. Brender, Junguk Hur, Arzucan Özgür, Yang Zhang

Supplementary Information

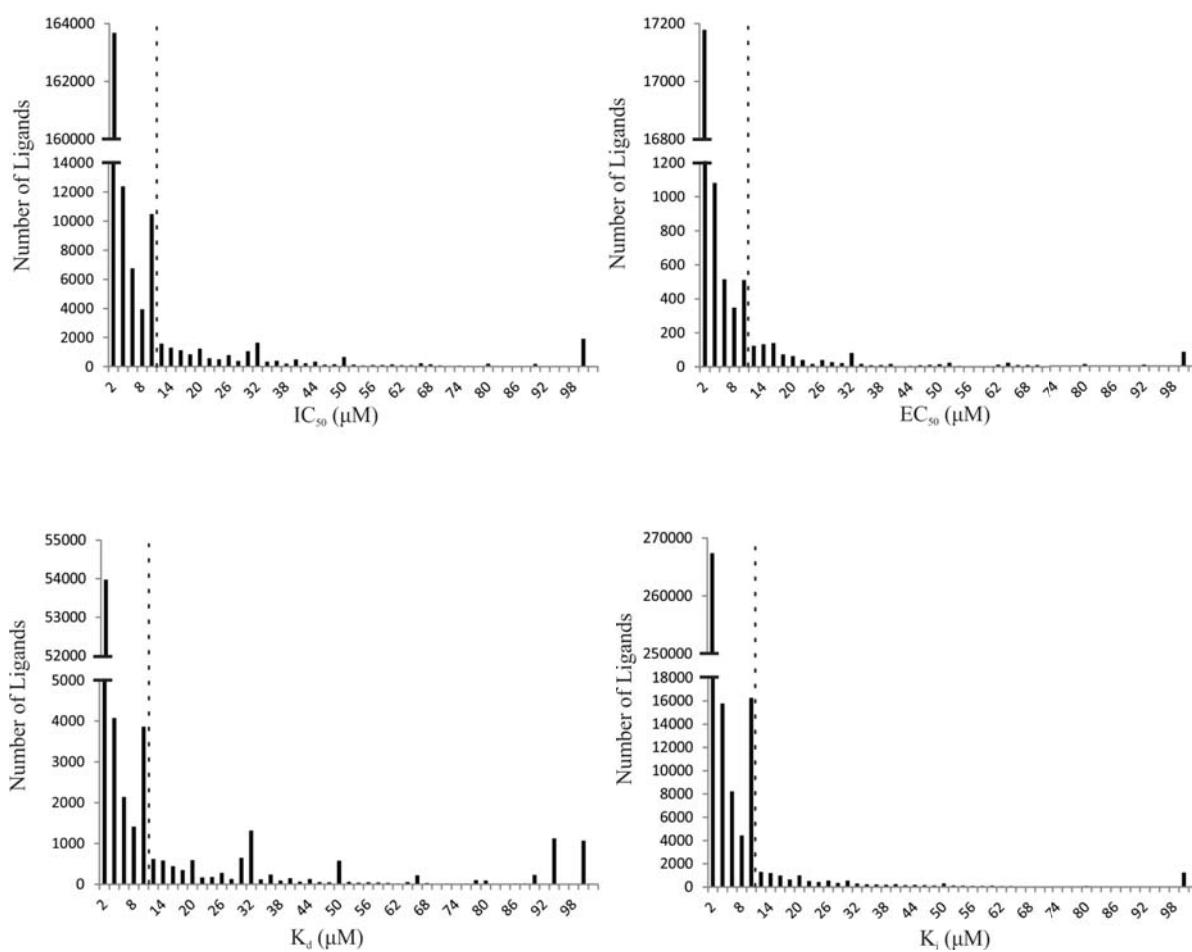

Figure S1. Distribution of ligand activities in GLASS database. Cutoffs (dotted line) were made based on (A) IC₅₀, (B) EC₅₀, (C) K_d, and (D) K_i, where ligands with an activity greater than 10 μM were discarded. The number of ligands was tabulated with bins of 2 μM.

Figure S2. Histogram of ligand associations with GPCRs in the Class A (rhodopsin-like) family. The figure only displays the GPCRs with at least one ligand associations.

Figure S3. Histogram of ligand associations with GPCRs in the Class B (secretin) family. The figure only displays the GPCRs with at least one ligand associations.

Figure S4. Histogram of ligand associations with GPCRs in the Class C (metabotropic glutamate/pheromone) family. The figure only displays the GPCRs with at least one ligand associations.

Figure S5. Histogram of ligand associations with GPCRs in the Class F (frizzled /smoothened) family. The figure only displays the GPCRs with at least one ligand associations.
